

## **Vance Brand Airport Noise Abatement Information Communications Plan**

Longmont-Vance Brand Airport maintains and publishes a Voluntary Noise Abatement Procedures. The purpose of this document is to outline how that Voluntary Noise Abatement Procedures is communicated to aircraft operators and tenants utilizing the Vance Brand Airport.

### **Noise Abatement Information is posted and distributed in the following ways:**

- Our VNAP is available online at: <https://longmontcolorado.gov/airport/>
- A comprehensive Voluntary Noise Abatement Procedures (VNAP) is published and distributed to resident flight schools and Fixed Base Operators (FBOs).
- Noise Abatement Posters are displayed in flight schools, FBOs, and self-service fuel stations.
- The Airport periodically publishes a newsletter. This newsletter always includes information directing pilots to our VNAP.
- Abatement information is published in digital formats that can be easily accessible on devices commonly used as electronic flight bags (EFB's) including phones, tablets, and computers.
- Information directing pilots to our Voluntary Noise Abatement Procedures is published in the Chart Supplement. A document used by pilots while navigating.
- Airfield Noise Abatement signage has been placed on the departure ends of runway 11 and 29.
- Information directing pilots to our Voluntary Noise Abatement Program is broadcast over our Automated Weather Observation Station (AWOS) so that any pilots departing from or coming into our airport will be made aware of its existence through a voice recording.

### **Quarterly Safety & Noise Abatement Meetings:**

In order to increase awareness of our Voluntary Noise Abatement Program, the airport conducts Quarterly Safety & Noise Abatement Meetings. All resident flight schools are required to attend these quarterly meetings. During these meetings, we discuss safety and operational factors at the airport. In addition to this, airport staff covers noise mitigation efforts, current noise metrics, and other noise abatement information. These meetings provide an open forum for discussion on noise abatement and help aircraft operators gain a deeper understanding of noise issues and mitigation efforts.

To further increase the efficiency of these meetings, Vance Brand Airport coordinates with Rocky Mountain Metropolitan Airport to hold their safety and noise meetings together. This helps increase the dissemination of safety and noise abatement information to more pilots.
